1 USER REQUIREMENTS SPECIFICATION

1.1 Introduction

1.1.1 Purposes

This is an SRS for the AGC web application. Document describes general function and non-functional requirements of the system which will be used as input for software design document and will be used as a checklist for software test documentation. Meanwhile users and stakeholders can use it to have an overview of the whole system requirements.

1.1.2 Definition and Acronyms

Term	Description
Tra Da	Group name
AGC	Tra Da project name
AGC101	Project code
SRS	Software requirement specification
GUI	Graphical user interface
API	Application program interface
User	Anyone who uses the system
Admin	A website owner and also a person who is given specific permission for managing and controlling the system.
Customer	A user who have registered on the system
Restaurant owner	Someone who has a restaurant and wants his restaurant to be a part the application, and he/she is also a customer

Guest	Anyone who is not a customer
Stakeholder	Any person who has interaction with the system
index page	Home page or main page

Table 1 Definition and Acronyms

1.2 Overall Description

1.2.1 Business Process Overview

AGC is a web application aiming to connect customers and restaurants together. AGC will be available on modern web browsers which also compatible on mobile and tablets devices. The site is reliable and convenient which help users to easily access, search for information about the best places to eat, the promotions, the food and the service provided; refer, evaluate the quality of the venue through user reviews and rates features. Besides, AGC provides information of restaurants addresses, food, and table booking service.

1.2.2 Product Features

AGC provides huge advantages of helping customers to find their best fits restaurants and menus as well all others basic information needed such as contact information, address, etc.

On the other hand, restaurants owner also have chances to show their products and services on AGC, which will gain their potential customers. Besides, the owners will also able to access some business statistical data such as total amount of booking, etc.

Our main functions are grouped by users as follow:

1. Admin

- ✓ Control users' accounts.
- ✓ Add/modify restaurants' categories.
- ✓ Add/modify news.
- ✓ View statistical information.
- ✓ View Customers and Restaurant owners information

2. Customers

- ✓ Access to plenty of restaurant basic information and information of the system as a whole.
- ✓ View specific restaurant information in detail.
- ✓ Reserve tables if needed.
- ✓ Search for interested restaurants or even dishes.
- ✓ View restaurants' list based on interest, address, restaurant category, etc.
- ✓ Interact with social network

3. Restaurant owners

- ✓ Create and publish restaurant information on the websites.
- ✓ View customers table booking as well as customers' basic information.
- ✓ Update table booking status for customers.
- ✓ Interact with social network.

4. Guests

- ✓ View general information in AGC.
- ✓ Register with AGC.

1.2.3 User Characteristic

AGC users are grouped into 4 categories:

1 Admin: is AGC system owner, who have a high knowledge in information technology, specifically internet and web service. In practical admin is a person who have a high understanding of overall system and system in detail. Furthermore admin also have to have ability to make a deal with restaurant owners as clients.

2 Customers: are anyone who have registered on AGC website, but not restaurant owners. They want to know both general and in detail information of what AGC provides, also need a fast service with friendly user interface.

3 Restaurant owners: are anyone who have registered with AGC website as restaurant owner, they want to gain as many customers as possible, also need a clear content manager as well as accurate business statistical data with a cheap prices.

4 Guests: are general users who come to browse on AGC website, they might be interested or not interested in finding restaurants, but if they are interested in the want to have found their desirable one.

1.3 Functional Requirements

1.3.1 Activate/deactivate user

Access right: Admin

Description: When admin checks all requirement of registration he/she will immediately activate that specific user. On the other hand the admin also have right to deactivate accounts those are unvalid.

1.3.2 Activate/deactivate restaurant

Access right: Admin

Description: Before any of restaurant information fields to be inserted and display admin will check all requirement and decide whether to activate or not. On the other hand if the restaurant is not valid on the time gone by the admin will also deactivate that account.

1.3.3 Rate restaurant

Access right: Admin

Description: Admin will give rating to restaurants based on restaurant reputation calculate from amount of likes, shares, comments, and about of table booking.

1.3.4 Delete restaurant

Access right: Admin

Description: If a restaurant have vilolate any rules, those considered to be deleted, admin will use this function to delete or if those account which are no longer exist will be removed as well.

1.3.5 Delete user

Access right: Admin

Description: Admin will use this function to remove account that no longer exist or invalid and is condered to be removed.

1.3.6 View statistical data

Access right: Admin

Description: This is the place where admin is able to view amount of restaurants, customers, booking amount and others.

1.3.7 Add/delete category

Access right: Admin

Description: All categories to be used by restaurant will be added by admin.

1.3.8 Write/delete/update news

Access right: Admin

Description: Admin will use this function to publish news to users, meanwhile the admin can also edit and delete the news as well.

1.3.9 View all users

Access right: Admin

Description: Admin will be able to view all users' accounts information.

1.3.10 View restaurant information

Access right: Customer/Restaurant owner

Description: This function allow user to view restaurant information basic information and in detail, which will be display as a list of restaurant or can be displayed as specific restaurant index page.

1.3.11 View all restaurants' categories

Access right: Admin

Description: Admin will be able to view all categories those have been created in AGC system.

1.3.12 View all news

Access right: Admin

Description: Admin will be able to view all news those have been created in AGC system both news that displaying to users and non-displaying news.

1.3.13 View all booking

Access right: Admin

Description: Admin will be able to view all table booking from all restaurants.

1.3.14 View booking detail

Access right: Admin

Description: Admin will be able to view each table booking detail from all restaurants.

1.3.15 Book restaurant

Access right: Customer/Restaurant owner

Description: This function allows customer as well as restaurant owner as a normal users to make a table reservation from any restaurants.

1.3.16 View booking history

Access right: Customer/Restaurant owner

Description: This function allows users to view their table booking history, by simply click on View booding history tab on profile information page.

1.3.17 View account

Access right: Customer/Restaurant owner

Description: This is a general function allows users to view their profile information

1.3.18 Update account

Access right: Customer/Restaurant owner

Description: This is a function that allows users to update their personnel profile information; it will be displayed in the profile pages.

1.3.19 Update password

Access right: Customer/Restaurant owner

Description: Users have ability to change their personnel password, this by access to Change password tab in the account information page.

1.3.20 Add/update/delete restaurant information

Access right: Restaurant owner

Description: This function is strictly used by only restaurant owner, he/she can use this function to add, update, and delete his /her own restaurant information.

1.3.21 Add/update/delete restaurant banner

Access right: Restaurant owner

Description: This function allow user to add banner image to his or her restaurant, the users are able to choose images from their computer devices, and then it will be uploaded to AGC server.

1.3.22 Set restaurant profile picture

Access right: Restaurant owner

Description: User will choose one image from banner images which are added previously to be used as restaurant profile picture.

1.3.23 Add/update/delete food information

Access right: Restaurant owner

Description: This function allows user to add menu/dishes, as well as images, names, description, etc. On the other hand user can also update and deleted as needed.

1.3.24 Update booking status

Access right: Restaurant owner

Description: When customer have fulfilled their table booking or cancelled, or invalid, restaurant will come to manage booking tap and update those status, this status will be display in customers booking history as well.

1.3.25 Register

Access right: Guest

Description: This is a general function that allows none registered users to be able to register their account with AGC.

1.3.26 View general information

Access right: Guest

Description: As a guest, this function allow to none logged in or none account users to view general information from AGC such as home page, about page, user guide page, etc.

1.3.27 View restaurant information

Access right: Guest

Description: This function allow user to view restaurant information in depth by clicking on any restaurant profile pictures or any links provided.

1.3.28 Log in/log out

Access right: Customer/Restaurant owner/Admin

Description: This is a general function allow logged in users to log out by clicking on log out on the top right corner of the header bar, or by clicking on Log out tab in the account page.

1.3.29 Search

Access right: All users

Description: This a function where users can input keyword on the textbox and click on search button to see restaurants results related to their keyword.

1.3.30 Social interaction

Access right: All users

Description: This function use third party software such as Facebook API to allow users to interact with social network on AGC web pages such as like, share, comment, etc.

1.4 Non – Functional Requirements

✓ **Availability:** The web application must be available 24/7, even if many users are accessing at the same time.

✓ **Maintainability:** Many functions will be added and upgraded in future versions; therefore the codes must be clear and clean, extendable and reusable.

✓ **Reliability:** Information display in AGC website must be accurate and reliable.

✓ **Portability:** Users must be able to access AGC through any of their modern web browsers and any device and AGC website must display the right screen for the right devices.

✓ **User interface friendliness:** Users must be able to understand general GUI by sense, with giving any directions.

2 SOFTWARE REQUIREMENTS SPECIFICATION

2.1 Introduction

2.1.1 Purposes

This SRS aims at describing functional and non-functional requirement in details. This document will be used by project team and stakeholders to review and check the progress of the project as well as giving direction to development team to know what to be implemented and also to assure the system will correctly perform its intended functionalities.

2.1.2 Definition and Acronyms

This section describes the definitions, terms, and acronyms that are used in software requirements specification.

Items	Description
SRS	software requirement specification
Tra Da	group name
AGC	project name
AGC101	project code
Admin	administrator
GUI	graphical user interface
User	anyone who uses the system
Admin	A website owner and also a person who is given specific permission for managing and controlling the system.
Customer	a user who have registered on the system
Restaurant owner	Someone who has a restaurant and wants his restaurant to be a part the application
Stakeholder	Any person who has interaction with the system
User	anyone who uses the system
Admin	A website owner and also a person who is given specific permission for managing and controlling the system and also be a customer
Customer	a user who have registered on the system
Restaurant owner	Someone who has a restaurant and wants his restaurant to

	be a part the application, and he/she is also a customer
Guest	anyone who is not a Customer
Stakeholder	Any person who has interaction with the system
index page	home page or main page
http	Hypertext Transfer Protocol
CodeIgniter	Php framework

Table 2 Definition and Acronyms

2.2 System Purpose

The purpose of developing AGC web application is divided into 2 main categories:

1. To provide solution for users who are looking for restaurant information before entering to the physical place.
2. To provide a cheap channel for restaurant owner to publish their products and/or services to gain potential customers.

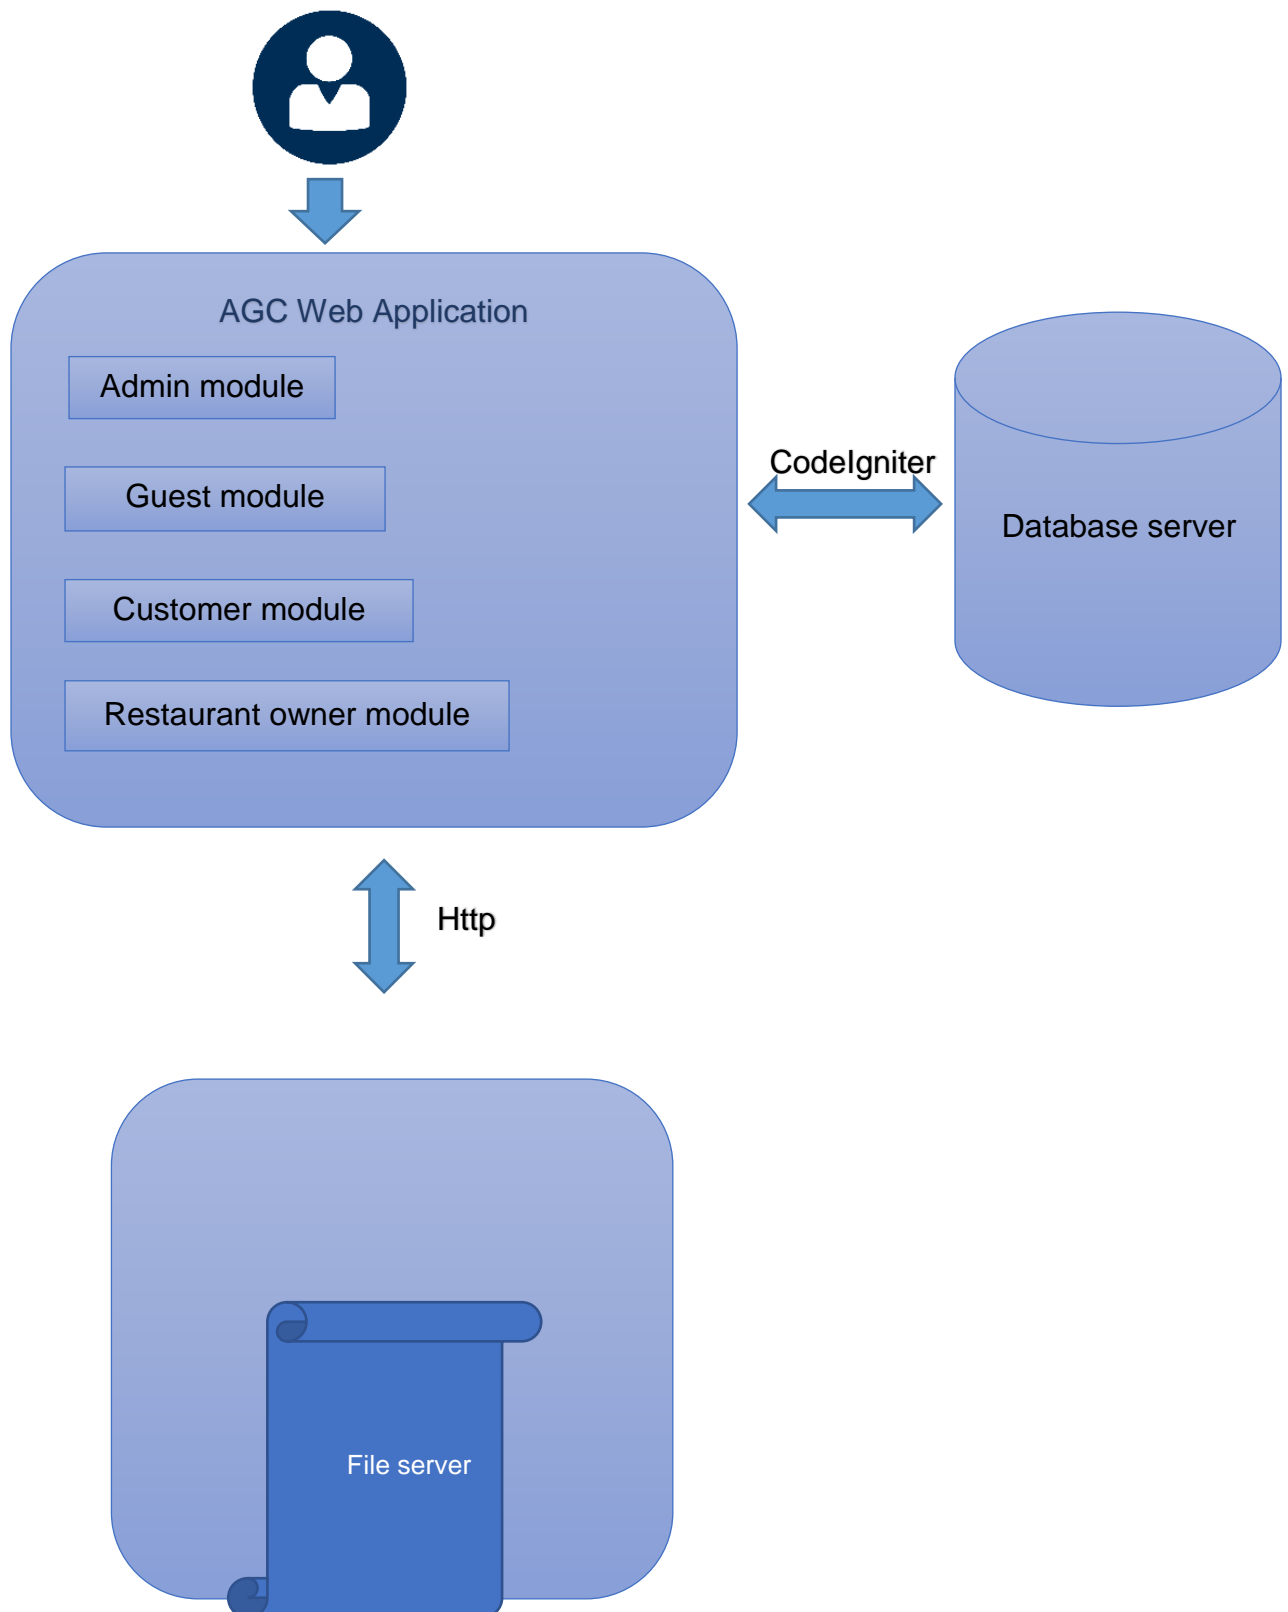

The users can be any people who just have no idea of what/where to be eating, or can be any people just need more information about restaurants, therefore, AGC come into take place. We aim to connect consumers and providers together. Finally, it will benefits all sides.

2.3 Scope

- The system aim to develop for web platform which can be accessible from all types of devices with responsive GUI.
- All restaurants to be displayed of AGC website will be inside Hanoi, Vietnam only.
- Language to be used is Vietnamese.
- The functions to be developed are based on 4 types of users:
 - Admin
 - Customer
 - Restaurant owner
 - Guest

2.4 Overall Description

2.4.1 System overview

AGC system comprises of 3 part: Web server, File server, and database server.

Webserver will be used for managing and displaying information about restaurants and the system as a whole. Every function will be kept in its own module. Admin module will be used by admin, Restaurant owner module will be used by restaurant owner, Customer module will be used by customer, and Guest module will be used by guest.

File server will be used for storing and managing image files.

Database server is where contents and information are stored. Web server will communicate with the database to get data, add, delete and update contents on the website.

2.4.2 Product Features

AGC system has following group of main functions and supported functions

Use case No.	Group of function	Function	Description
UC001	Admin management	Activate/deactivate user	Allow users who have account to use system or not
		Activate/deactivate restaurant	Allow restaurant information to display on AGC website or not
		Rate restaurant	Increase or decrease restaurant rating
		Delete restaurant	Remove all restaurant data

		Delete user	Delete account registered in AGC system
		View statistical data	View total number of restaurant, table booking, etc.
		Add/delete category	Add new or delete category to be used by restaurant
		Write/delete/update news	Fully modify and publish news
		View all users	View users' accounts
		View all categories	View restaurant' categories those available on AGC system
		View all restaurant	View restaurants' information to decide whether to activate or deactivate
		View all news	Views all news those have been written in AGC system
		View all booking	View all tables booking
		View detail booking	Views each table booking in detail
UC002	Customer management	Login	General function used for login to the system
		Logout	General function used for logout of the system

		View restaurant information	View index page of the restaurant
		Book restaurant	Book tables in a restaurant
		View booking history	View all his/her own tables booking details
		View account	View information related to personnel information
		Update password	Change password
UC003	Restaurant owner management	Add/update/delete restaurant information	Fully modify his/her own restaurant information
		Add/update/delete restaurant banner	Fully modify his/her own restaurant banner images
		Set restaurant profile picture	Choose image from banner images to use as restaurant profile picture
		Add/update/delete food information	Fully modify dishes/menu in his/her own restaurant
		Update booking status	Change table booking status for customers
UC004	Guest management	Register	Become a member or customer of AGG website
		View general information	View all general information which is not reserved for only specific users
		View restaurant information	View restaurant information in detail in restaurant index page

		Search	General function used for search restaurant based on users keyword
		Like	Like a restaurant using Facebook account
		Comment	Comment a restaurant using Facebook account
		Share	Share a restaurant using Facebook account
Note: Admin and Restaurant owners are able to perform all functionalities those customers are able to, Customer can perform all functionalities those Guest is able to except register			

Table 3 AGC product features

2.4.3 User Characteristics

There are 4 types of users in AGC system: Admin, Customer, Restaurant owner, and Guest. Each type of users is able to perform only his own functionalities which is clearly described in product features and other parts in this document. The users only need internet connection and a web browsers to access AGC system.

2.4.4 User Documentation

In AGC website there will be a user guide tap for users, which will be displayed on the top of the navigation bar. The contents will instruct users to have more understanding about AGC systems. This includes: instruction for restaurant owner to manage contents, Answers to users for those that might have, and many more.

2.4.5 Assumption

AGC has made the following assumption in developing this system

- The functionalities provided will be enough for restaurant owners to manage their basic restaurant contents
- Restaurant owner will visit the website daily or hourly to check if there is a table booking
- Users have electronic devices those can connect to the internet.
- General data inserted by users which is cannot be checked by the system will be accurate
- Users will have prior social network account such as Facebook and Email to perform social network interaction functions

2.5 Entity Relation Model

2.5.1 Entity-Relationship Diagram

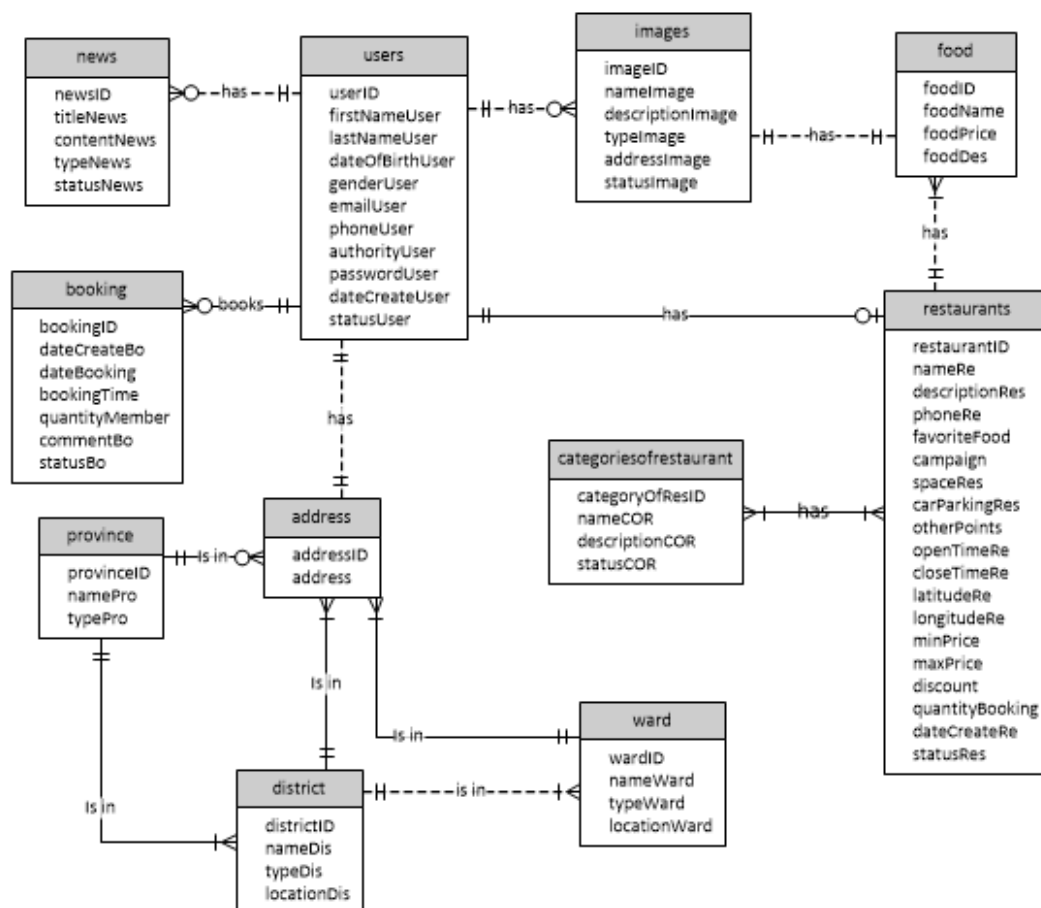

Figure 1 AGC entity relationship diagram

2.5.2 Entity Detail

Entity name	Description	Occurrence
Address	Users' specific address	Each address is occupied by a user
Booking	Making reservation or book tables in restaurants	Each booking is made by a customer
News	news that posted in a website	News is information that admin want to send to users
Users	All people who visit AGC website	There are admin, customer, restaurant owner and guest as users
Images	A general term describes all images	Each image will be added by a user
Food	a term describes menu or dishes	Food is a menu in a restaurant
Restaurants	A general term describes all restaurants	Each restaurant has one restaurant owner
categoriesofrestaurant	Restaurants category	categoriesofrestaurant Is a type of restaurant
Ward	A term describes a villages	A ward is an address of users
District	A general term describes all districts	A district is an address of users
Province	A general term describes all provinces	A province is an address of users

2.6.1 UC001 Admin management

2.6.1.1 Use Case Diagram

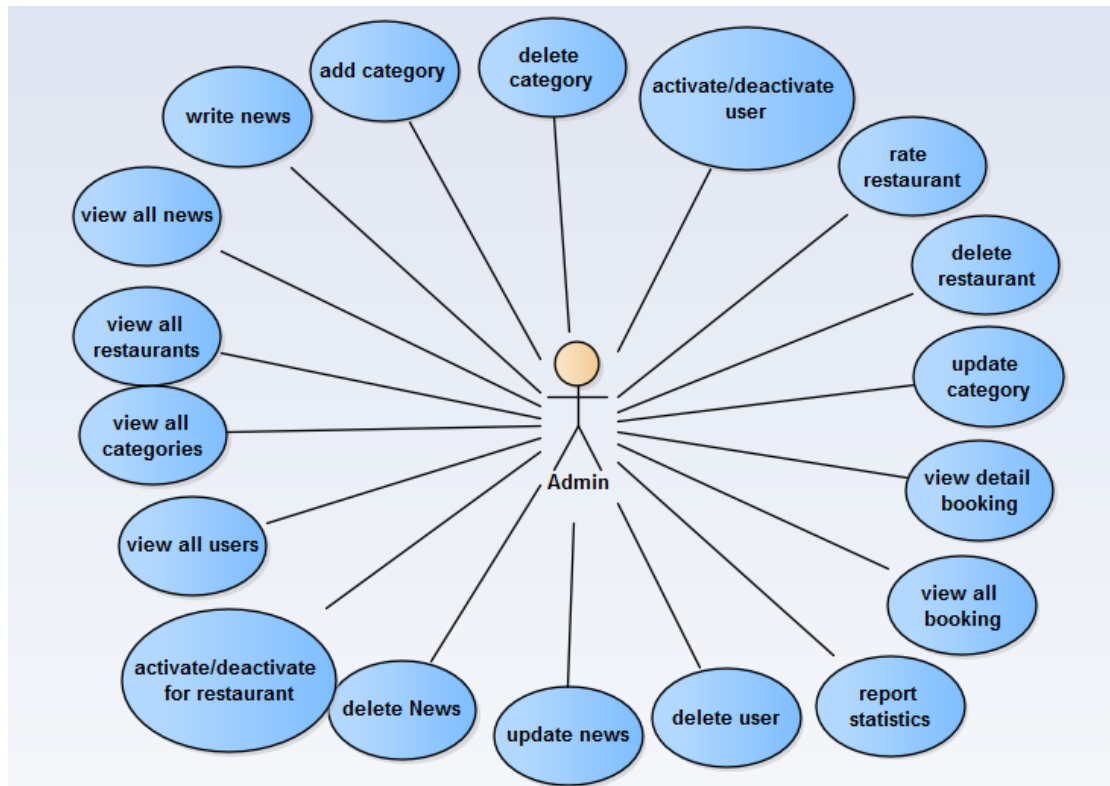

Figure 2 AGC admin management use case diagram

2.6.1.2 Use Case Specification

2.6.1.2.1 UC001 – 01 Write news

Use Case ID	UC001-01	Version	1.0
Use Name	Write news		
Actor	Admin		
Description	The function allows admin to create new news in AGC.		

Precondition		After admin login AGC, choose “Quản trị” → “Tin tức” → “Thêm mới”
Trigger		Click button “Cập nhật”
Post-Condition		Message "Cập nhật thành công" appear and redirect to list news screen.
Main flows		
Step	Actor	Action
1	Admin	User types the URL into internet browser and then enters.
2	AGC	The system displays Login screen
3	Admin	Enter the username and password into the login panel.
4	AGC	Display Home screen
5	Admin	Click the “Quản trị” Tab from the menu panel.
6	AGC	Display Admin screen
7	Admin	Click “Tin tức” → “Thêm mới”
8	AGC	Display create news screen
9	Admin	Enter new data for news.
10	Admin	Click button “Cập nhật”
11	AGC	Display success update status
12	AGC	Go to list news screen

Alternative flows		
AT1	At step 10 in the main flows, if admin click button “Quay về”	
Step	Actor	Action
10.1	Admin	Click button “Quay về”
11.1	AGC	Go to list news screen
Alternative flows		
AT2	At step 10 in the main flows, if admin do not full information	
Step	Actor	Action
11.2	AGC	Error message appear.
12.2	Admin	Enter full information
13.2	Admin	Click button “Cập nhật”
14.2	AGC	Display success update status
15.2	AGC	Go to list news screen

2.6.1.2.2 UC001 – 02 Create category

Use Case ID	UC001-02	Version	1.0
Use Name	Create category		
Actor	Admin		
Description	The function allows admin to create new categories in AGC.		
Precondition	After admin login AGC, choose “Quản trị” → “Danh mục” → “Thêm mới”		
Trigger	Click button “Lưu”		

Post-Condition		Redirect to list categories screen
Main flows		
Step	Actor	Action
1	Admin	User types the URL into internet browser and then enters.
2	AGC	The system displays Login screen
3	Admin	Enter the username and password into the login panel.
4	AGC	Display Home screen
5	Admin	Click the “Quản trị” Tab from the menu panel.
6	AGC	Display Admin screen
7	Admin	Click “Danh mục” → “Thêm mới”
8	AGC	Display create category screen
9	Admin	Enter new data for category.
10	Admin	Click button “Lưu”
11	AGC	Go to list categories screen
Alternative flows		
AT1	At step 10 in the main flows, if admin click button “Quay về”	
Step	Actor	Action
10.1	Admin	Click button “Quay về”
11.1	AGC	Go to list category screen
Alternative flows		
AT2	At step 10 in the main flows, if admin do not full information	

Step	Actor	Action
11.2	AGC	Error message appear.
12.2	Admin	Enter full information
13.2	Admin	Click button “Lưu”
14.2	AGC	Display success update status
15.2	AGC	Go to list category screen

2.6.1.2.3 UC001 – 03 Update news

Use Case ID	UC001-03	Version	1.0
Use Name	Update News		
Actor	Admin		
Description	The function allows admin to edit new news in AGC.		
Precondition	After admin login AGC, choose “Quản trị” → “Tin tức” → “Xem”		
Trigger	Click button “Cập nhật”		
Post-Condition	Message "Cập nhật thành công" appear and redirect to list news screen.		
Main flows			
Step	Actor	Action	
1	Admin	User types the URL into internet browser and then enters.	
2	AGC	The system displays Login screen	
3	Admin	Enter the username and password into the login panel.	
4	AGC	Display Home screen	
5	Admin	Click the “Quản trị” Tab from the menu panel.	

6	AGC	Display Admin screen
7	Admin	Click “Tin tức”
8	AGC	Display list news screen
9	Admin	Click “Xem” to view and edit a news.
10	AGC	Display information of news.
11	Admin	Edit data in news.
12	Admin	Click button “Cập nhật”
13	AGC	Display success update status
14	AGC	Go to list news screen
Alternative flows		
AT1	At step 10 in the main flows, if admin click button “Quay về”	
Step	Actor	Action
10.1	Admin	Click button “Quay về”
11.1	AGC	Go to list category screen

2.6.1.2.4 UC001 – 04 Update category

Use Case ID	UC001-04	Version	1.0
Use Name	Update category		
Actor	Admin		
Description	The function allows admin to update category in AGC.		
Precondition	After admin login AGC, choose “Quản trị” → “Danh mục” → “Sửa”		
Trigger	Click button “Lưu”		

Post-Condition		Redirect to list categories screen
Main flows		
Step	Actor	Action
1	Admin	User types the URL into internet browser and then enters.
2	AGC	The system displays Login screen
3	Admin	Enter the username and password into the login panel.
4	AGC	Display Home screen
5	Admin	Click the “Quản trị” Tab from the menu panel.
6	AGC	Display Admin screen
7	Admin	Click “Danh mục”
8	AGC	Display list categories screen
9	Admin	Update new data for category.
10	Admin	Click button “Lưu”
11	AGC	Go to list categories screen
Alternative flows		
AT1	At step 10 in the main flows, if admin click button “Quay về”	
Step	Actor	Action
10.1	Admin	Click button “Quay về”
11.1	AGC	Go to list categories screen

2.6.1.2.5 UC001 – 05 Delete news

Use Case ID	UC001-05	Version	1.0
--------------------	----------	----------------	-----

Use Name		Delete News
Actor		Admin
Description		The function allows admin to delete news in AGC.
Precondition		After admin login AGC, choose “Quản trị” → “Tin tức”
Trigger		Click button “Xóa”
Post-Condition		Refresh list news screen.
Main flows		
Step	Actor	Action
1	Admin	User types the URL into internet browser and then enters.
2	AGC	The system displays Login screen
3	Admin	Enter the username and password into the login panel.
4	AGC	Display Home screen
5	Admin	Click the “Quản trị” Tab from the menu panel.
6	AGC	Display Admin screen
7	Admin	Click “Tin tức”
8	AGC	Display list news screen
9	Admin	Click “Xóa” to delete a news.
10	AGC	Display dialog with message “Xóa XXX”.
11	Admin	Click button “OK”.
12	AGC	Refresh list news screen.
Alternative flows		
AT1	At step 9 in the main flows, if admin click button “Hủy”	

Step	Actor	Action
9.1	Admin	Click button “Hủy”
10.1	AGC	Return list news screen

2.6.1.2.6 UC001 – 06 Delete category

Use Case ID	UC001-06	Version	1.0
Use Name	Delete category		
Actor	Admin		
Description	The function allows admin to delete category in AGC.		
Precondition	After admin login AGC, choose “Quản trị” → “Danh mục”		
Trigger	Click button “Xóa”.		
Post-Condition	Refresh list news screen.		
Main flows			
Step	Actor	Action	
1	Admin	User types the URL into internet browser and then enters.	
2	AGC	The system displays Login screen	
3	Admin	Enter the username and password into the login panel.	
4	AGC	Display Home screen	
5	Admin	Click the “Quản trị” Tab from the menu panel.	
6	AGC	Display Admin screen	
7	Admin	Click “Danh mục”	
8	AGC	Display list category screen	
9	Admin	Click “Xóa” to delete a category.	

10	AGC	Display dialog with message “Xóa XXX”.
11	Admin	Click button “OK”.
12	AGC	Refresh list categories screen.
Alternative flows		
AT1	At step 9 in the main flows, if admin click button “Hủy”	
Step	Actor	Action
9.1	Admin	Click button “Hủy”
10.1	AGC	Return list categories screen

2.6.1.2.7 UC001 – 07 Activate/deactivate restaurant

Use Case ID	UC001-07	Version	1.0
Use Name	Activate/deactivate restaurant		
Actor	Admin		
Description	The function allows admin to active/deactive for restaurant in AGC.		
Precondition	After admin login AGC, choose “Quản trị” → “Nhà hàng” → “Sửa”

2.7 Non-functional Specification

2.7.1 Reliability

- Errors should occurs no more than 10 times a year
- The mean time among failures should not more than one month

2.7.2 Performance Requirements

2.7.2.1 Availability

The system must be available to the users 24 hours a day, 7 days a week (not consider network failure) and also available for all smart phones, tablets and computers.

2.7.2.2 Response time

The maximum response time for any processes must be no longer than 10 seconds. However, it also depends on the internet bandwidth the network coverage's condition.

2.7.3 User Interface

2.7.3.1 Arrangement

There are 3 main parts in a web page:

- herder/navigation bar: shows main topics tabs
- body: shows main contents
- footer: shows additional information about AGC system

In some pages there might also be a sidebar.

2.7.3.2 Color

Background color is white, red color theme to attract users

2.7.3.3 Text

Vietnamese font format.

2.7.4 Design Constraints

- Tra Da team must follow MVC design pattern in CodeIgniter framework.
- GUI must not confuse users, developing team have to use the most familiar design to users.
- The system should not disclose too much information but rich enough for users need.
- Since the system is a data centric system, database management is crucially important, both primary key and foreign key constraints are carefully identified, as well as Entity, data types, relationship, attributes and null able values.

2.7.5 Security Requirements

The system should prevent all SQL injections, and keep users information securely by encrypt password using MD5 technology, and only authorized user can access his/her own private information.

2.7.6 Software Requirements

All data is stored on the server, therefore users need to have only electronic devices those have a web browser and internet connection.
